

A B S T R A C T

A container for dental material having a body including a first chamber and a second chamber separated by a first wall member. A dispensing member separated from the second chamber by a second wall member. A device for applying pressure to a first dental material contained within the first chamber. Actuation of the device for applying pressure causes the first dental material to be expelled from the first chamber through the first wall member and mixed with a second dental material in the second chamber. Further actuation of the device for applying pressure causes the mixed dental materials to be expelled from the second chamber through the second wall member to the dispensing member.
